1. EXECUTIVE SUMMARY

Univex Network is a next-generation Layer-1 blockchain protocol designed with a post-quantum security approach. It aims to provide a resilient foundation that remains usable as quantum computing capabilities advance — addressing a structural risk that many existing blockchains will eventually face.

The network is built around NIST-standardized post-quantum cryptographic primitives (CRYSTALS-Kyber for key exchange and ML-DSA / Dilithium for signatures). These algorithms are integrated as part of the protocol design rather than treated solely as future upgrades. Univex supports multiple Dilithium parameter sets (Dilithium2, Dilithium3, Dilithium5) so the network can balance security and performance as research and hardware evolve.

Univex operates a dual-token model that clearly separates everyday utility from long-term governance:

- **UVX (Utility Token)** — Total supply 12 billion. Used for rewards, staking, swaps, payments, gaming, premium memberships and other ecosystem actions. Contract: 0x4378354A8fF59661262254D560D7a9AE8EF034A4
- **UNIVEX (Governance Token)** — Total supply 1.5 billion. Used for voting, protocol proposals, treasury decisions and DAO administration. Obtainable via Telegram mining, staking, swapping and a limited public presale.

UVX is released gradually through planned migration stages (first migration: 400 million UVX). Users may stake or swap UVX to obtain UNIVEX. Long vesting schedules and smart-lock vaults are designed to reduce the risk of sudden large unlocks.

Current Status (September 2026)

- Listed on CoinGecko • Public Explorer & RPC live • Chain ID 7932
- Chainlist: <https://chainlist.org/chain/7932> • Website: project.univexnetwork.xyz
- Telegram Mining active • UVX Premium Membership live • KYC testing completed
 - UniDex ~70% complete (target launch November 2026)
 - \$UNIVEX Presale scheduled to begin 28 October 2026

Table 1: Quick Overview

Key Point	Description
Architecture	Layer-1 blockchain designed with post-quantum cryptographic primitives
UVX Utility Token	12 billion total — gradual migration release (1st: 400M UVX)
UNIVEX Governance	1.5 billion total — staking / swapping / Telegram mining / presale
Security Approach	NIST-selected algorithms (Kyber + Dilithium / ML-DSA)
Community Share	45% of tokens reserved for community rewards
Live Infrastructure	CoinGecko listed • Explorer live • Chain ID 7932 • Public RPC
2.0 Release	17 August 2026 — Telegram mining + Premium Membership
Timeline	Genesis Q2 2026 → PQC Testnet Oct 2026 → Full PQC Mainnet pathway 2027

2. VISION & MISSION

Vision

To build an accessible, secure and user-focused Web3 ecosystem that ordinary people and organizations can trust for digital ownership, fair participation and practical decentralized tools.

Mission

- Provide simple and approachable Web3 access for new and existing users
- Develop independent blockchain infrastructure with clear technical foundations
- Support secure digital asset management through non-custodial design and cryptographic best practices
- Enable decentralized trading via UniDex and related services
- Foster meaningful community participation through transparent rewards and governance
- Pursue long-term ecosystem development rather than short-term speculative cycles

3. THE PROBLEM

The current Web3 landscape presents several persistent challenges that limit mainstream adoption and long-term resilience:

- **Complex user experience** — Many platforms require technical knowledge that excludes ordinary users.
- **Fragmentation** — Wallets, exchanges, identity systems and applications often operate in isolation.
- **Security concerns** — Most existing blockchains rely on classical cryptography that is expected to become vulnerable to large-scale quantum computers.
- **Centralized infrastructure dependence** — Many “decentralized” services still rely on centralized points of failure for critical functions.
- **High barrier for new users** — Onboarding, key management and compliance processes remain difficult for first-time participants.
- **Disconnected services** — Trading, KYC, rewards and ecosystem tools are frequently separated, creating friction and poor user experience.

4. THE UNIVEX SOLUTION

Univex addresses these challenges by building an integrated, user-focused Layer-1 ecosystem with clear separation of utility and governance, a post-quantum security design, and practical products that people can actually use.

Core ecosystem flow:

Univex Blockchain → UVX Token → Univex App → Telegram MiniApp / Bot → UniDex → KYC Platform → Future Web3 Services

Each layer is designed to reinforce the others: the blockchain provides the secure base, UVX powers everyday activity, the App and Telegram MiniApp lower the entry barrier, UniDex enables decentralized trading, KYC supports compliant access, and future services expand real-world utility.

5. UNIVEX BLOCKCHAIN

Univex is a Layer-1 blockchain designed with modular architecture so that each component has a clear responsibility. This structure is intended to support security, upgrades and expansion over time.

Network Information

Item	Details
Network Name	Univex Network
Chain ID	7932
Chainlist	https://chainlist.org/chain/7932
Token Symbol (Governance)	UNIVEX (listed on Chainlist)
UVX Contract Address	0x4378354A8fF59661262254D560D7a9AE8EF034A4
Block Explorer	https://explorer.univexnetwork.com
Public RPC	https://rpc.univexnetwork.com
Official Website	https://project.univexnetwork.xyz
CoinGecko	https://www.coingecko.com/en/coins/univex
Consensus & Validation	Nodes validate transactions; parameters adjustable via UNIVEX governance
Execution Environment	Smart contracts and state changes with PQC signature support
Observability	Public explorer and multi-signature reserve tracking

Core Protocol Layers

Layer	Function
Consensus & Validation	Transaction validation; governance-adjustable rules
Execution Environment	Smart contracts and state transitions with PQC signatures
Utility Services	Wallet, Swap, UniDex, Gaming, Marketplace, Payments, Premium Membership
Identity & Access	Multi-device login + planned zero-knowledge identity + In-App P2P after KYC
Telegram Integration	Direct \$UNIVEX mining and community engagement
AI Layer (L1 AI)	Under development for smart routing, risk signals and UX enhancements

6. POST-QUANTUM SECURITY APPROACH

Most public blockchains today rely on RSA or elliptic-curve cryptography (ECDSA). Large-scale quantum computers are expected to weaken or break these methods using algorithms such as Shor's algorithm. Univex does not claim to be immune to all future attacks; instead, it adopts a deliberate post-quantum security approach from the design stage.

CRYSTALS-Kyber is used for secure key exchange (lattice-based Key Encapsulation Mechanism). **ML-DSA (Dilithium)** is used for digital signatures. Univex researches and supports Dilithium2, Dilithium3 and Dilithium5 parameter sets so the network can select appropriate trade-offs between security strength and performance.

The native non-custodial wallet targets Dilithium5 (ML-DSA-87) for higher long-term security. These choices are intended to provide a stronger foundation against known quantum threats compared with classical-only designs.

Parameter	Value / Note
Kyber key size	~1,184 bytes
ML-DSA / Dilithium signature size	~1,088 bytes (varies by parameter set)
Security target	AES-128 equivalent / NIST Category III

Parameter	Value / Note
Supported parameter sets	Dilithium2, Dilithium3, Dilithium5 (ML-DSA-87)
Design goal	Resistance to known quantum algorithms (Shor's, Grover's)

Important: No cryptographic system can be declared “unhackable” or “100% secure.” Univex’s approach is designed with post-quantum primitives and will be subject to independent security audits, ongoing monitoring and responsible disclosure processes as the network matures.

7. DUAL-TOKEN ECONOMY

Univex deliberately separates utility from governance so that everyday network use and long-term decision-making remain distinct.

7.1 UVX — Utility Token

Total supply: 12,000,000,000 UVX

Release: Gradual migration stages (first release: 400,000,000 UVX)

Contract: 0x4378354A8fF59661262254D560D7a9AE8EF034A4

UVX is used for rewards, staking, app features, swaps, gaming, marketplace purchases, shopping and Premium Membership activation. Premium Membership is a pure utility sink — UVX is spent for enhanced rewards, higher mining multipliers, priority features and exclusive deals. This design aims to create ongoing demand tied to real activity rather than pure speculation.

7.2 UNIVEX — Governance Token

Total supply: 1,500,000,000 UNIVEX

UNIVEX carries voting power for protocol changes, node rules, treasury spending, grants and partnerships. Governance is planned to move progressively on-chain toward community control.

7.3 How Users Obtain UNIVEX

- Staking UVX in the official module to earn UNIVEX over time
- Swapping UVX for UNIVEX via native facilities and upcoming UniDex
- Telegram App Mining (live from 17 August 2026) — hard cap 270,000,000 UNIVEX
- Limited public presale of 60,000,000 UNIVEX starting 28 October 2026 (from Community Rewards allocation)

8. TOKENOMICS & ALLOCATION

Distribution prioritizes the community while applying vesting and lock mechanisms to team, partners and liquidity.

Sector	Share	UVX	UNIVEX	Unlock Rule
Community Rewards	45%	5,400,000,000	675,000,000	Activity / demand based
■ Telegram Mining	—	—	270,000,000	Hard-capped (from 17 Aug 2026)
■ \$UNIVEX Presale	—	—	60,000,000	Starts 28 Oct 2026
■ Remaining Community	—	—	345,000,000	Missions, airdrops, activity
Ecosystem & Grants	20%	2,400,000,000	300,000,000	24-month linear
Team	15%	1,800,000,000	225,000,000	24-month cliff then unlock
Liquidity Pool	15%	1,800,000,000	225,000,000	Locked at launch
Strategic Partners	5%	600,000,000	75,000,000	6-month cliff

9. UNIVEX APP & TELEGRAM MINIAPP

The Univex App and Telegram MiniApp / Bot form the primary user-facing interfaces. They are designed to lower the barrier for new participants while providing real utility for existing users.

Key features include:

- User account creation and multi-device access
- Telegram mining of \$UNIVEX (hard cap 270M)
- Rewards claiming and mission participation
- Profile and community engagement tools
- UVX Premium Membership activation (utility sink)
- Future deep integration with UniDex, KYC and broader UVX ecosystem services
- Security-conscious design with planned non-custodial wallet support

10. UniDex — NATIVE DECENTRALIZED EXCHANGE

UniDex is Univex Network's native decentralized exchange. It is being built to provide seamless trading within the ecosystem and to create additional real utility and demand for UVX and UNIVEX.

Planned Core Features:

- Markets and trading pairs
- Token swap interface
- Liquidity provision
- Portfolio tracking
- Bridge functionality (future)
- Explorer and analytics integration
- Future Launchpad capabilities
- Global Whales / large-holder visibility tools (planned)

Current Development Status

UniDex is approximately **70% complete**.

Remaining stages: final development → internal testing → security review → fixes → beta → public release.

Target public launch window: around November 2026.

11. KYC PLATFORM

A privacy-conscious identity verification system is part of the ecosystem roadmap. The goal is to enable compliant access to certain features (such as in-app P2P transfers) without unnecessarily exposing personal data.

Planned / implemented capabilities:

- User verification and identity checks
- Account eligibility determination
- KYC submission flow
- Review and approval process
- Controlled access to future ecosystem services after successful verification

Current status: KYC platform development and testing have been completed. Final user approval / access processes and production rollout remain to be fully activated as the broader Phase 2 timeline progresses.

12. ECOSYSTEM UTILITIES & USE CASES

Lasting token value depends on real usage. Univex is building utilities that create continuous demand for UVX.

- **Native PQC Wallet** — Non-custodial design targeting Dilithium5 signatures for staking, transfers and membership.
- **Telegram Mining & Community Hub** — Live since 17 August 2026 with a 270M UNIVEX hard cap.
- **UVX Premium Membership** — Utility sink that consumes UVX for enhanced features and rewards.
- **UniDex** — Native DEX for trading and liquidity (~70% complete).
- **Gaming Hub** — On-chain verifiable fairness; UVX for in-game activity.
- **Marketplace & Shopping** — Digital goods and planned merchant acceptance of UVX.
- **In-App P2P (post-KYC)** — Compliant peer-to-peer transfers after verification.
- **Payment Rails** — Longer-term plans for cards and Tier-1 liquidity connections (2027 scaling phase).

13. LIVE NETWORK STATUS & TECHNICAL DETAILS

Item	Details
Network Name	Univex Network
Chain ID	7932
Chainlist	https://chainlist.org/chain/7932
Governance Token	UNIVEX (available on Chainlist)
UVX Contract	0x4378354A8fF59661262254D560D7a9AE8EF034A4
Explorer	https://explorer.univexnetwork.com
Public RPC	https://rpc.univexnetwork.com
Official Website	https://project.univexnetwork.xyz
CoinGecko	https://www.coingecko.com/en/coins/univex
Telegram Mining	Active (hard cap 270M UNIVEX)
UniDex Progress	~70% complete — target ~November 2026
KYC Platform	Development & testing completed
Presale	\$UNIVEX starts 28 October 2026 (60M tokens)
L1 AI Module	In active development
Secure Wallet	Non-custodial PQC wallet (Dilithium5 target) in progress

These endpoints confirm that core public infrastructure is already operational. Developers can connect using Chain ID 7932 and the public RPC.

14. PRESALE, LIQUIDITY & FUND USAGE

A limited public presale of 60,000,000 UNIVEX tokens is scheduled to begin on **28 October 2026**. These tokens are drawn exclusively from the Community Rewards allocation (675,000,000 UNIVEX).

Exact pricing, participation rules, vesting schedules and detailed fund-usage breakdowns will be published on official channels closer to the event. Participants should review those materials carefully before making any decision.

Liquidity status: Current liquidity has not yet been fully established on major markets. Liquidity provision is part of the planned allocation (15% Liquidity Pool) and will be activated according to the project's staged roadmap and market readiness. Users should not assume deep or immediate secondary-market liquidity.

Future CEX listing strategy and additional liquidity measures will be communicated transparently once they are finalized and appropriate.

15. STRATEGIC ROADMAP (2026–2027)

The roadmap is organized into measurable phases. Dates and status may be adjusted as technical, regulatory or community conditions evolve.

Phase 1 — Core Infrastructure & Genesis | Q2 2026 | Status: Complete

Multi-platform access, referral system, Google Play preparation (July/August 2026 window).

Phase 1.5 — Univex Network 2.0 | 17 August 2026 | Status: Live

Telegram mining of \$UNIVEX (hard cap 270M), UVX Premium Membership, enhanced community engagement.

Phase 2 — Protocol Health & Scale | Q3–Q4 2026 | Status: In Progress

Inactivity Slashing Engine, KYC v1 (testing completed), In-App P2P after KYC, Mission Engagement Layer, PQC Testnet work (October 2026), UniDex finalization (~70% complete → target November 2026), \$UNIVEX Presale opens 28 October 2026.

Phase 3 — On-Chain Convergence | Q1 2027 | Status: Planned

Non-custodial Web3 wallet (Dilithium5 focus), native swap + UniDex integration, DAO governance live, continued community growth.

Phase 4 — Quantum-Aware Global Scaling | Full Year 2027 | Status: Planned

Full PQC mainnet activation pathway, payment cards and Tier-1 liquidity efforts, global utility scaling, L1 AI integration.

16. SECURITY, AUDITS & TRANSPARENCY

Security is treated as an ongoing process. Before major token events, smart contracts and core distribution logic are scheduled to undergo external audits by independent firms. Post-launch plans include monitoring, public bug-bounty programs and formal verification of critical modules where feasible.

Major reserve pools are intended to be controlled by multi-signature wallets with public tracking so that community, ecosystem, team and liquidity balances can be verified via the explorer. Users are encouraged to independently verify on-chain data.

17. GOVERNANCE MODEL

Formal governance power resides with the UNIVEX token. Holders may influence protocol upgrades, node criteria, treasury and grant spending, and major partnerships. Early phases retain core-team coordination under multi-signature controls, with the explicit goal of progressing toward full on-chain DAO control after Phases 3 and 4.

18. DEFLATIONARY & ECONOMIC MECHANISMS

- **Google Play Launch Halving** — Base mining emission rate is designed to be cut by 50% once the official app is verified live on the Google Play Store.
- **Inactivity Slashing Engine** — Idle nodes may have rewards reduced or burned so that active participation is preferred.
- **UVX Premium Membership Sink** — Continuous consumption of UVX for enhanced features supports ongoing demand.

19. SECURITY & RISK DISCLOSURE

IMPORTANT RISK NOTICE

Cryptocurrency and blockchain projects involve significant risk. Participation may result in partial or total loss of capital. Nothing in this whitepaper constitutes financial, investment, legal or tax advice. Always conduct your own research and, if necessary, consult qualified professionals before making any decision.

Participants should carefully consider, among others, the following categories of risk:

- **Market & Volatility Risk** — Token prices can fluctuate dramatically and may fall to zero.
- **No Guarantee of Value** — Holding UVX or UNIVEX does not guarantee any return or future value.
- **Technology Risk** — Software, cryptography and network design may contain undiscovered vulnerabilities.
- **Smart-Contract Risk** — Bugs, exploits or unintended behavior in smart contracts can lead to loss of funds.
- **Blockchain / Network Risk** — Consensus failures, attacks, forks or prolonged downtime are possible.
- **Liquidity Risk** — Secondary markets may be thin or non-existent at times; selling may be difficult or costly.
- **Regulatory Risk** — Laws and regulations governing digital assets continue to evolve and may adversely affect the project or participants.
- **KYC / Privacy Risk** — Identity verification processes involve data handling; users should understand the privacy implications.
- **Operational & Execution Risk** — Roadmap items may be delayed, modified or cancelled.
- **Quantum & Cryptographic Evolution Risk** — While designed with post-quantum primitives, no system is future-proof against all possible advances.

By engaging with Univex Network products or tokens, participants acknowledge that they understand these risks and accept full responsibility for their decisions.

20. INVESTOR / FUNDING INFORMATION

Univex Network may explore strategic investment and partnership opportunities to support continued ecosystem development. Any investment or equity offering will be subject to applicable laws, due diligence, definitive agreements and required approvals.

This whitepaper does not constitute an offer to sell or a solicitation of an offer to buy any securities in any jurisdiction. Nothing herein should be interpreted as an invitation to invest.

21. LEGAL ENTITY & CONTACT INFORMATION

CERTIFICATE OF ORGANIZATION — UNIVEX NETWORK LLC

Item	Details
Legal Name	UNIVEX NETWORK LLC
Entity Type	Limited Liability Company (LLC)
Jurisdiction	State of Wyoming, United States of America
Registered Office	5830 E 2nd St, Ste 7000, Casper, WY 82609
Registered Agent	REPUBLIC REGISTERED AGENT LLC
Registered Agent Address	5830 E 2nd St Ste 7000, Casper, WY 82609
Statutory Compliance	W.S. 17-28-101 through W.S. 17-28-111
Issuing Authority	Office of the Secretary of State, State of Wyoming
Official Contact Email	admin@univexnetwork.com
Website	https://project.univexnetwork.xyz

UNIVEX NETWORK LLC is organized under the laws of the State of Wyoming. The registered agent is REPUBLIC REGISTERED AGENT LLC. For official correspondence: admin@univexnetwork.com. Please allow reasonable time for response on administrative and legal matters.

22. CONCLUSION & CALL TO ACTION

Univex Network is building a Layer-1 ecosystem designed with post-quantum cryptographic principles, a community-first token distribution (45% to community), practical utilities (App, Telegram MiniApp, UniDex, KYC, Premium Membership, future payments), transparent multi-signature reserves, public infrastructure (explorer, RPC, CoinGecko listing, Chain ID 7932), and a properly organized Wyoming LLC legal entity.

Users gain tools and participation opportunities. The project offers a differentiated security narrative and measurable development milestones. You are invited to explore the official application, join Telegram mining, prepare for the \$UNIVEX presale beginning 28 October 2026, follow UniDex progress, and participate in future governance processes.

All official documents and updates are published at project.univexnetwork.xyz. Formal inquiries: admin@univexnetwork.com.

Build quantum-aware. Own your sovereignty. Join Univex Network.
